LIST OF CHEMICAL PRODUCTS

LETTER EN374	CHEMICAL SUBSTANCE	Nº CAS	CLASS
A	Methanol	67-56-1	Primary alcohol
B	Acetone	67-64-1	Cetone
C	Acetonitrile	75-05-8	Nitrile compound
D	Dichloromethane	75-09-2	Chlorine hydrocarbon
E	Carbon disulfide	75-15-0	Sulphate organic compound
F	Toluene	108-88-3	Aromatic hydrocarbon
G	Diethylamine	109-89-7	Amine
H	Tetrahydrofuran	109-99-9	Heterocyclic ether
I	Ethyl acetate	141-78-6	Ester
J	n-heptane	142-82-5	Saturated hydrocarbon
K	Sodium Hydroxide 40%	1310-73-2	Inorganic alkaline
L	Sulphuric acid 96%	7664-93-9	Inorganic, oxidising mineral acid
M	Nitric acid 65%	7697-37-2	Inorganic, oxidising mineral acid
N	Acetic acid 99%	64-19-7	Organic acid
O	Ammonia Hydroxide 25%	1336-21-6	Organic Alkaline
P	Hydrogen peroxide 30%	7722-84-1	Peroxide
S	Hydrofluoric acid 40%	7664-39-3	Mineral organic acid
T	Formaldehyde 37%	50-00-0	Aldehyde

EN ISO 374-5: 2016

The gloves offer protection against micro-organisms: bacteria and fungi when they comply with EN 374-2:2014 (air leakage and water leakage), because they test for tightness.

EN ISO 374-5: 2016

VIRUS

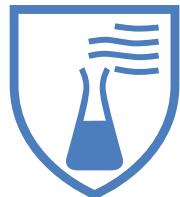

Gloves that also offer protection against viruses must comply with ISO 16604: protection against penetration by blood-borne Phi-X174 bacteriophages.

GLOVES AND CLOTHING FOR CHEMICAL PROTECTION

Workers have to face on a daily basis some chemical risks when handling more or less aggressive products (acids, solvents, oils, ...). There are more than 100,000 chemical substances cataloged and identified by CAS number. The table shown in the chemical protection standard reflects the most important substances.

To choose a glove that protects us from chemical substances, we must take into account the family of the CHEMICAL SUBSTANCE we are going to handle, the contact time, the level of dexterity, etc. Juba, through this brochure, wants to facilitate the search for the most suitable glove and we briefly explain the regulations and tests that these gloves must comply with.

EN ISO 374:2016

STANDARD EN ISO 374: 2016 PROTECTION AGAINST CHEMICALS

EN 374:2016 establishes requirements for gloves intended to protect the wearer against chemicals and/or microorganisms. This standard does not establish mechanical protection requirements. All gloves are category III.

IS DIVIDED INTO THE FOLLOWING PARTS

EN ISO 374-1:2016

Terminology and performance requirements for chemical hazards.

EN 374-2:2014

Determination of penetration resistance.

EN 16523-1:2015

Permeation by liquid chemicals under continuous contact conditions.

EN ISO 374-4:2019

Determination of resistance to chemical degradation.

EN ISO 374-5:2016

Terminology and requirements for microorganism risks.

THREE NEW PROTECTION LEVELS IN GLOVE PERMEABILITY

TYPE A: against at least 6 chemicals from the table and having a minimum level 2 (more than 30 minutes).

TYPE B: against at least 3 substances and at most 6 chemical substances from the table and having a minimum level 2 (more than 30 minutes).

TYPE C: against 1 chemical from the table and having a minimum level 1 (more than 10 minutes).

TEST METHODS

PENETRATION TEST **374-2**

It is the breakthrough of chemicals through the glove at the non-molecular level. Air leakage test. The glove is inflated with air and immersed in water.

Water leakage test. The glove is filled with water and checked for water droplets.

DEGRADATION TEST **EN 374-4**

Degradation of some of the properties of the glove due to contact with a CHEMICAL SUBSTANCE. A perforation test is performed. In case this test cannot be carried out, a weight variation test is performed.

PERMEATION TEST **EN 16523-1**

It is the breakthrough of chemicals at the molecular level. The resistance of a glove material to permeation by a chemical is determined by measuring the passage time of the chemical through the material.

PERMEABILITY RESISTANCE LEVELS*

AVERAGE BREAKTHROUGH TIME	PERFORMANCE LEVELS
>10 minutes	CLASS 1
>30 minutes	CLASS 2
>60 minutes	CLASS 3
>120 minutes	CLASS 4
>240 minutes	CLASS 5
>480 minutes	CLASS 6

* Time it takes for a chemical product to penetrate the glove
